

Lets go back in history...take a look at this news article from 1952 which says the glaciers in Alaska had already lost half their size:

Cairns Post (Qld. : 1909 - 1954) (about)

Monday 18 February 1952

POLAR ICE THAW INCREASING

GLACIERS SAID TO BE MELTING

CLEVELAND, Feb. 16 (A.A.P.).—
Dr. William S. Carlson, an Arctic
expert, said to-night that the Polar
icecaps were melting at an astun-
ishing and unexplained rate and
were threatening to swamp seaports
by raising the ocean levels.

Dr. Carlson said it would take
hundreds of years for the melting
to have much effect, but the rate
in the last half century had been
exceedingly rapid.

"The glaciers of Norway and
Alaska are only half the size they
were 50 years ago. The tempera-
ture around Spitzbergen has so
modified that the sailing time has
lengthened from three to eight
months of the year," he said.

Some of the climate change theorists believe that man-made global warming started in the 1950s so let's go back further—how about 1923?

NORTH POLE MELTING.

CHANGE OF CLIMATE.

MANY GLACIERS VANISHED.

Is the North Pole going to melt en-
tirely? Are the Arctic regions warm-
ing up, with prospect of a great cli-
matic change in that part of the
world?

Science is asking these questions
(says "Popular Science Siftings").
Reports from fishermen, seal hunters,
and explorers who sail the seas
around Spitzbergen and the eastern
Arctic all point to a radical change
in climatic conditions, with hitherto
unheard-of high temperatures on that
part of the earth's surface.
